

Allerderm® Spot On

Dosage form: Spot-on.

Composition: Skin lipid complex (Ceramides 3, Ceramides 6 II, Ceramides I, Cholesterol, Sodium Lauroyl lactylate, Xanthan gum and water).

Properties: **Allerderm® Spot On** contains exclusive mixture of ceramides, fatty acids and cholesterol (skin lipid complex) similar to those in the skin of healthy cats and dogs. **Allerderm® Spot On** is a topical product particularly suited to dogs with skin conditions. It is highly recommended as complementary support for dermatoses in cats and dogs with superficial skin conditions, thanks to a combination of ingredients that help re-establish the integrity of the skin.

Instruction for use: For best results, apply after a bath, when the fur is completely dry.

Part your pet's hair until the skin is visible and simply place the pipette directly in contact with the skin, squeeze gently and apply the contents onto the skin.

Dosage: One pipette a week for 4 weeks. The dose may be increased to two to three pipettes a week, up to one pipette a day if necessary, depending on the seriousness of the skin condition or as advised by your veterinarian. To limit relapses and to keep the skin and hair coat healthy, apply one pipette a month.

Storage instructions: Store at or below 25 °C.

Presentation: Carton containing 6 pipettes (2 ml or 4 ml).
